25X1

MEMORANDUM FOR THE RECORD

FROM:

[redacted]
Chief, CAMS Division/ODP

25X1

SUBJECT: Possible Compromise of Classified Material [redacted]

25X1

REFERENCE: [redacted] Memorandum, Subject: Possible
Compromise of Classified Material, dated 2 August 1982

25X1

1. This memorandum presents a damage assessment from the Office of Data Processing regarding a possible compromise of classified material which occurred [redacted] on 27 July 1982. The actual details leading up to the discovery are presented in the referenced memorandum. Briefly stated, four documents with various classifications were found in a unsecure environment. They were:

25X1

- 1) "Recommended Enhancement Report, COMIREX Automated Management System (CAMS)" dated 5 November 1976.
- 2) "Contractual Assistance in Support of CAMS Top-Level Requirements for Mid-1980s"
- 3) Datacom Outgoing
- 4) "The Intelligence Community Staff, Telephone Directory, dated 21 May 1980. [redacted]"

25X1

2. This damage assessment report can only address CAMS-related material and as such only addresses the first two documents. The third item is a group of unfilled forms marked SECRET. The source of these is unknown. The damage assessment for these forms is more appropriately addressed by Datacom personnel. The fourth document was classified CONFIDENTIAL and contains the names and phone numbers of management personnel in the IC Staff. The damage assessment for this document is more appropriately addressed by the IC Staff. [redacted]

TOP SECRET

25X1

25X1

3. The first document was a draft, "Recommended Enhancement Report, COMIREX Automated Management System (CAMS)", prepared by the [redacted] under contract to [redacted] the COMIREX ADP Coordinator. It was eventually released in final form in December of 1976. The document was a very rough draft consisting of many "cut and paste" pages from apparently quite a few documents. Some of these pages had the classification of the original document. Actual classification on the pages ranged from no markings at all (some of which should have been TS/T-K), through SECRET to TOP SECRET within the T-K control system channel. [redacted]

25X1

25X1

4. The intent of this document was a critique of the CAMS1 system which became operational in October 1976. It contained pages from the initial CAMS User Manual, displaying selected data entry menus along with recommended enhancements for each. The purpose of the CAMS1 menus was to enable COMIREX member and staff personnel to express nominations for national imagery collection, exploitation, and products. The document, which was in rough draft form, should have been classified as TOP SECRET/TALENT-KEYHOLE because it contains

25X1

[redacted] ment did not contain substantive information on current imagery targets, strategies, or quantitative/qualitative capabilities. Although the document illustrated unfilled menus which contain collection tasking parameters there is no description of the uses, valid values and ranges, or other capabilities of these parameters. Even the units

25X1

5. If this document were compromised it is the opinion of ODP that it would reveal:

- 1) [redacted]
- 2) The existence of an Intelligence Community organization which manages the use of these systems;
- 3) Specific names of imagery systems and tasking parameters; and,
- 4) The name of the compartmented system within which the information is controlled.

TOP SECRET

25X1

25X1

25X1

This document was prepared in 1976. Thus, the information which it contains is obsolete in many areas. Nothing within this document compromises ADP or telecommunication systems security items such as passwords, user IDs, LOGON procedures, equipment, or locations. According to the [redacted] Security Officer (see reference) there is no indication that this document was compromised. However, if compromised this information poses no significant threat to the continued operation of CAMS. [redacted]

25X1

25X1

6. The second document was evidently the initial draft of a sole source justification for ODP [redacted] to do mid-1980 CAMS1 requirements for the CAMS Project Office. The document contains two paragraphs in question with a pencilled portion marking of "S". It is our opinion that this draft portion marking was incorrect and would later have been changed to "U" in the final version. The information contained in those paragraphs represents no serious compromise [redacted]

25X1

25X1

7. ODP has taken positive steps to ensure that the inadvertent removal of classified CAMS documents does not occur again. Effective immediately, the outgoing materials for all Staff and contract personnel who leave CAMS will be screened prior to their leaving the project.
